

CURTAIN RODS

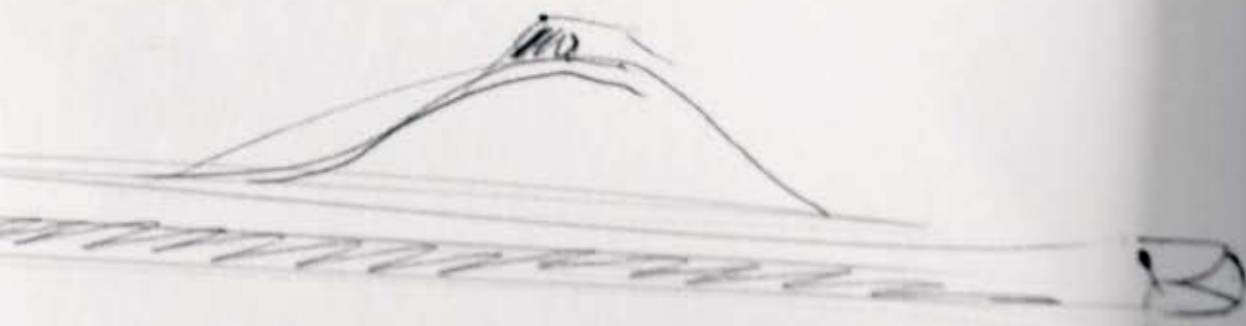

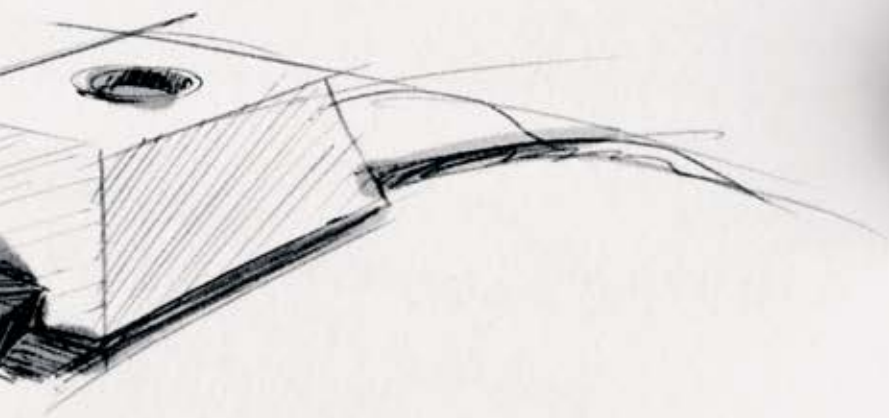

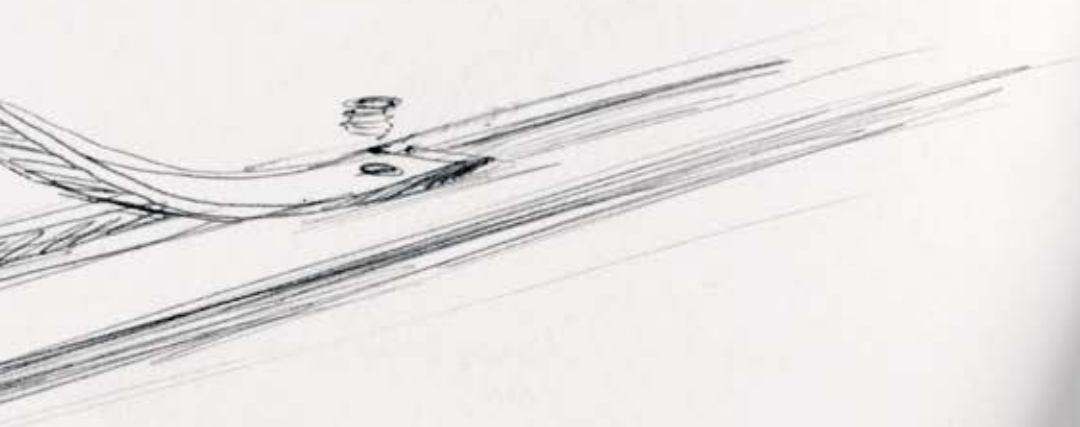

IMPULS

Does form follow function or the other way around?

At MHZ, we answer this question in our own particular manner.

During development we meld excellent design and high functionality into unique products.

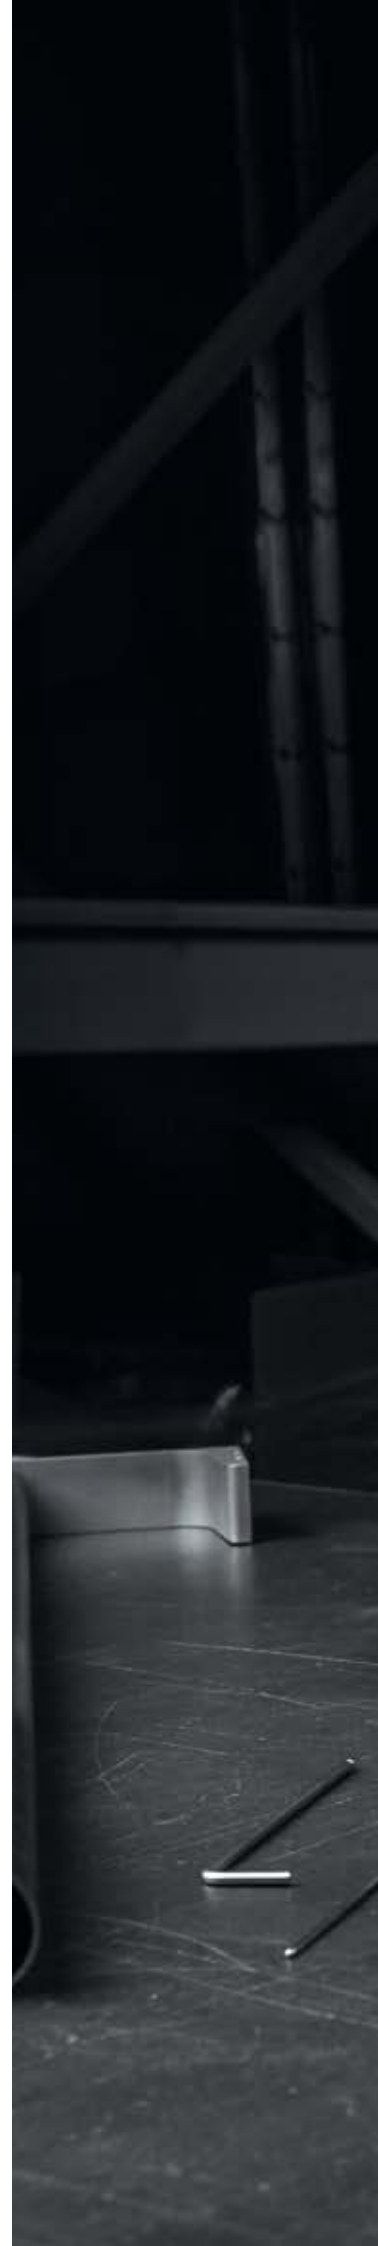

NEW PRODUCTS FOR ETERNITY

4 |

Our pursuit is to develop curtain rods which design is not only convincing in the present, but will be equally convincing in the future. To achieve this, our developers, designers, and design engineers invest their passion and expertise into the production of our products. The result is top-class solutions such as Novell, Luv & Lee, Snäps or Frieze.

Quality springs from passion and expertise - through an intimate relationship with material and fabrics - through experience and precision. This is all based on the idea of manufacturing, which is based on the people that stand behind the quality of their products.

FINAL TOUCHES

Each of our products stand for independence through form, lines, colour, surface finishings and technical sophistication. This is made possible through craftsmanship and a great degree of attention to the final touches. The perspective of the observer, the alloy composition and the direction of the brush stroke lend each of our gems unique nuances resulting in a harmonious whole.

LUV & LEE

STORM & TRANQUILITY

Luv & Lee meld the bracket and end piece together. This is not only a new approach aesthetically, but also technically.

ELEGANCE & BALANCE

Space and curtain in a harmonious balance - this is possible by the ceiling bracket Novell. The height adjustment levels uneven ceilings and provides a balanced overall look. In this process Novell unifies high efficiency with sophisticated design.

FRIEZE

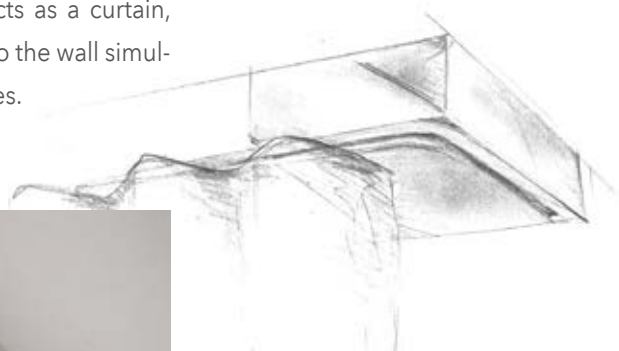

MODEL | FRIEZE 86/25 CAJA

POTENTIAL & PERSPECTIVE

In Frieze, the rod and end piece supplement each other creating a unique design piece, that acts as a curtain, board and blacks out any light right up to the wall simultaneously. This opens up new possibilities.
