MHZ ADHESIVE SET | *Simply ingenious*

New method of mounting sun protection products

THE NEW METHOD OF MOUNTING WITHOUT DRILLING AND SCREWING

The discreet MHZ adhesive set enables the simple mounting of MHZ sun protection products in the glazing bead of the window - entirely without drilling and screwing.

It has been specially developed for the MHZ products *Twin-Line* Venetian blind, pleated blind type 11-8220 and AREO Roman blind – simply adhere it to the glass pane, clip the MHZ blind into the holder and you're done.

The MHZ sun protection blind can be removed at any time in order to clean the windows. The MHZ adhesive set remains on the glass pane. It can be removed from the glass pane without leaving any residues. (The adhesive beads cannot be reused after removal!)

MHZ ADHESIVE SET | *Product advantages*

- Mounting in the glazing bead without drilling and screwing
 - Narrow adhesive profiles prevent the ingress of light at the sides
 - Optimum rear ventilation through the circulation of air between the sun protection and the window
